Description

I'm a full-stack software developer currently looking for a summer internship. I've used Java, HTML/CSS/JS, C++, Bash script and PHP in many open-source projects on GitHub. I've worked with LUIS, QnA maker, MS BotFramework, async C#, SQL, and Angular+TS in a professional SDLC. I'm passionate for AI, ML, modifying OSES and open-source contributions. I'm proficient with Object-Oriented Programming and very large codebases, and I can surmount the steepest learning curves as a very fast learner.

Helping people with code is my life goal.

Experience

2020

- Maintaining and developing [i3lock-color](#), the most popular fork of i3lock, a popular lockscreen on GitHub
- Developing Smoothie, an Online Judge in Java Spring

2019

- Full-stack software development internship at Idea Notion Development Inc.
 - AI chatbot with LUIS, QnA Maker and async C#
 - Web & FB Messenger frontend with Angular+TS and SQL database
 - Project-wide unit testing
- Organized [YouthHax2019](#), Markham's second hackathon
- Spoke at TEDx about YouthHax2018
- Gave seminars "How to Enjoy Programming", "Intro to Git"
- Created a set of Linux tutorials on [Gist](#)
- Group 3 score on Canadian Computing Contest (Top 60 in Canada)
- Demoed at Hack The North 2019

2018 – 2019

- Tutored Computer Science
- Problem writer on DMOJ, Canada's Largest Online Judge

2018

- Organized YouthHax2018, Markham's first hackathon
- Gave seminar "Your First Website"
